EDUCATION

The University of British Columbia

Bachelor of Science in Computer Science, Minor in Data Science-Coop

Kelowna, British Columbia

Sep. 2021 – June 2026

- **Awards:** Dean's List, Deputy Vice Chancellor's Scholarship, Faculty of Science International Student Award
- **Relevant Courses:** Machine Learning, Data Analysis, Data Structures, Analysis of Algorithms, Time Series

EXPERIENCE

Software Development Intern

Equitable Life

May 2024 – Apr 2025

Waterloo, Ontario

- Engineered and deployed a full-stack stale pricing detection platform using Python, Flask, PostgreSQL, and SQL Server Agent; owned the solution end-to-end—from requirements and architecture to development and automation—reducing stale bond data by 95% and ensuring pricing accuracy across \$250M+ in fixed income assets.
- Enhanced Bloomberg integration pipelines by reverse-engineering pricing mismatches and optimizing transformation logic in Python and SQL, ensuring accurate valuation across accounting platforms.
- Built Power BI dashboards for cash flow forecasting and compliance reporting in collaboration with investment analysts; developed backend workflows using Pandas, SQLAlchemy, and Flask to improve data reliability and reduce manual validation by 60%.
- Built an internal chatbot using Python, Azure Functions, and Microsoft Teams APIs to automate secure API credential delivery from Azure Key Vault, with role-based access control and structured logging.
- Analyzed 250+ internal business processes using Python visualizations to identify high-error, high-latency workflows and prioritize candidates for RPA automation.

Research Assistant

Fairleigh Dickinson University

Apr 2025 - Present

Vancouver, British Columbia

- Developed and trained LSTM-based deep learning models for vehicle trajectory prediction using TensorFlow/Keras; structured multivariate GPS time-series data into fixed-length input sequences with corresponding future targets.
- Implemented 1D Convolutional Neural Networks (CNNs) to extract local spatial features from resampled trajectory sequences before feeding into LSTM layers, enhancing model learning of short-term movement patterns.
- Built preprocessing pipelines using Pandas and NumPy to handle missing data, resample timestamps, normalize features, and structure fixed-length input-output sequences for time-series modeling.
- Supervised by Dr. Anitha Saravana; tracked training and validation performance using loss curves and checkpoints, and visualized model outputs and sequence behavior using Matplotlib and Seaborn.

PROJECTS

Communicado - Event Ticketing Platform | *Python, Django, SQL, HTML/CSS, Docker*

Jan 2024 – Apr 2024

- Led development of “Communicado,” a Django-based event ticketing web app, collaborating in a cross-functional Scrum team to deliver secure, scalable features under an agile workflow.
- Implemented secure backend with Django and MySQL, applying unit and integration tests to follow Test-Driven Development (TDD) principles
- Built and deployed a CI/CD pipeline using GitHub Actions to enable scalable and automated deployment workflows

Analysis of ACME Company Dataset | *Python, Excel, SQL, Tableau*

Oct 2023 – Dec 2023

- Analyzed 7,000+ company records to uncover trends, generate predictive insights, and deliver strategic recommendations through advanced data visualizations.
- Wrote optimized SQL queries to extract and analyze data, ensuring accurate, actionable insights for business decision-making.
- Used Excel for initial data cleaning and transitioned to Tableau to create dynamic visualizations that supported key business decisions.
- Received the “Data Analysis with Databases Award” for a top 10% project, recognizing technical proficiency and high-impact business insights.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, SQL, R, HTML/CSS

Frameworks & Libraries: Flask, Django, React, Pandas, NumPy, SQLAlchemy, Seaborn, Matplotlib, TensorFlow, Keras, OpenCV

Tools: Git, Docker, Azure DevOps, GitHub Actions, Firebase, Power BI, Tableau, Microsoft SQL Server, Android Studio, Blue Prism, UiPath

Cloud & APIs: Microsoft Azure (including Azure Functions, Azure Bot Framework), Google Cloud Platform (GCP), Microsoft Teams APIs, Telegram Bot API, REST APIs, SOAP APIs

Databases: PostgreSQL, MySQL, SQLite, Microsoft SQL Server
